

Psychometric Driver Risk Assessment and E-Learning

We are able to provide our customers with academically validated psychometrically based driver assessments and identify behavioural risk. Created by Cranfield University, we can provide assessments for drivers for various vehicle categories and in multiple languages.

The assessment profiles a driver on a number of critical behavioural factors including: aggression, work related risk, driving excitement, ineffective coping strategies and susceptibility to fatigue.

Once the driver has been assessed, seven behavioural change e-learning modules are available for drivers to complete. Each module(s) are recommended based on the outcomes of the assessment and all of them focus on addressing behaviour.

THE PROCESS:

- ✓ Provide TTC with basic driver data i.e. E-mail address, name, employee reference number and group/department name
- ✓ Data uploaded into TTC's partner portal
- ✓ Driver will receive email and link to access a secure portal and commence the assessment process
- ✓ The result of the assessment will be collated by TTC and reported to the customer highlighting any issues or need for further engagement with the driver
- ✓ Proactive monthly management reporting from a TTC Account Manager
- ✓ Drivers can dip in and out of the six units until they are all completed, after which they will undertake a short assessment to validate the intended learning outcomes.

Delivery method:

- i The driver will receive an invite to complete the assessment by logging onto the portal
- i The risk assessment takes approximately 45 minutes to complete
- i At the end of the assessment the driver will receive feedback and their risk rating
- i Dependant on the result, the driver will receive notification to complete relevant e-learning module(s) tailored to the individual. This activity is tracked through the management portal and proactively reported to the customer by the nominated TTC Account Manager
- i For drivers recording a 'high risk' result, we would recommend a half day On Road Driver Development Course
- i TTC will provide a monthly management report on drivers completed, those outstanding and risk ratings

KEY BENEFITS:

- ✓ Academically validated driver risk assessment resulting in it being referenced in over 75 academic research papers
- ✓ Detailed driver profile reports
- ✓ Addresses driver behaviour through a number of e-learning modules, with targeted training interventions
- ✓ Multiple vehicle types covered
- ✓ Translated in over 30 languages
- ✓ Management information and individual risk profiles available
- ✓ Consistent assessment criteria
- ✓ Driver recruitment assessment module available

Suitable for:

- ☑ Suitable for any business requiring a psychometric driver risk assessment, which looks at behaviour rather than driving ability
